Storage

The server currently hosts three storage mediums:

- A 32GB eMMC (sort of more robust SD card) for the OS, configuration files and small applications
- A 1TB SSD for most applications (`/var/www`, `yunohost.app`) and home directories
- A 4TB HDD for multimedia and backups

Partitioning

All drives only contain one partition, formatted in ext4.

LVM was considered but added unnecessary complexity and made it harder to use the drives outside of the server without prior manipulations.
